## The STM1

## STM1 Description

The STM1 Transceiver provides worldwide satellite data transmit / receive capabilities for asset tracking and industrial remote communications, at a seriously economical price! The STM1 operates over the ORBCOMM low-earth orbit satellite network, providing unlimited global coverage with no blockage. It can significantly improve asset utilization by allowing clients to monitor, track, and manage their fixed and mobile assets around the world.

With the STM1's versatility, customers can quickly implement solutions that are optimized for their tracking and monitoring applications.
